

Daniil Olekh

Full-Stack TypeScript Developer

Vienna, Austria · remote, EU time zone · danyaolekhq@gmail.com · danolekh.com · github.com/danolekh · linkedin.com/in/danolekh · Telegram @danolekh

Full-stack TypeScript developer with about three years of commercial work. I take products from an empty repo to real users: React, Next.js and TanStack on the front, Node or Bun with PostgreSQL and Drizzle on the back, CI/CD and observability around it. Built an ed-tech platform solo that British teachers use today, built and deployed sportmagaz.com.ua (a store with its own admin panel) on my own, and shipped payments, identity and campaign services in an event-driven microservice platform. Claude Code daily, everything reviewed.

EXPERIENCE

Renewator · Software Engineer (contract) Jan 2026 – Sep 2026 · Remote

- Built event-driven Node.js microservices for a multi-brand platform (identity, gateway, payments, promotions, notifications): Express, Drizzle ORM, PostgreSQL, Redis Streams and pub/sub, Docker, GitLab CI.
- Built consoline.com solo: a four-language Astro site with WebGL2 animation, checked against Figma with pixel diffs.
- Shipped per-brand GEO access rules end to end: schema, the shared decision function, Redis counters in the gateway, monitoring alerts on threshold crossings, admin CRUD and the React admin UI.
- Money-correctness work: idempotent payouts keyed on the ledger index, one shared home for money-amount rules, credit expiry and its debit in a single statement, abuse limits on issuance, campaign dry-runs with per-user exclusion reasons.

Freelance (Upwork) · Full-Stack Developer Jan 2026 – Aug 2026 · Remote

- Rebuilt an agriturismo website on Astro, Tailwind and Strapi (IT/EN i18n, role-based CMS access, Vercel + Railway): mobile PageSpeed 69 → 99, load time ~16 s → under 2 s, 5.0 client review. Case study: danolekh.com/p/oasi-kadir
- Reverse-engineered the parallax carousel, card carousel and menu animation from the old site's minified WordPress bundle (no source available) and reimplemented them 1:1.
- Found and fixed hosting-compliance and DNS issues during the migration unprompted; full handover docs with everything under the client's own accounts.

Quextro · Founding Engineer Dec 2024 – Dec 2025 · Remote

- Built the entire ed-tech platform solo: Bun + Effect.ts + Drizzle ORM on the back, React 19 + TanStack Router on the front. Used today by British teachers and students.
- Designed the core LLM pipeline that extracts questions and topics from PDF exam papers, with Zod-validated output and retries when the model returns something wrong.
- Owned CI/CD, Docker containerization and OpenTelemetry observability on AWS and Railway.

Freelance · Full-Stack Developer May 2024 – Dec 2024 · Remote

- Built and deployed sportmagaz.com.ua solo, a sports-equipment store for Ukraine: Next.js 14, tRPC, Drizzle ORM and PostgreSQL, with a custom admin CMS for 2,000+ products (roles, specs editor, S3 image manager), attribute filters with live counts, Nova Poshta delivery lookup and Telegram order alerts.
- Re-platformed it in 2026 to static Astro on Cloudflare Workers: view transitions that morph the product photo into its page, prices re-checked on the server by an Effect checkout worker.
- 90+ Real Experience Score and steady organic SEO traffic (JSON-LD, sitemap, Google Merchant feed).

Radency · Software Engineer 2023 – 2024 · Kyiv / remote

- Optimized a multi-tenant system (React, Express, Firebase) serving 10,000+ active users.
- Built internal Vue/NestJS tools and Chrome extensions used daily by the HR department.

PROJECTS

Azulejo (azulejo.danolekh.com): Ceramics storefront on TanStack Start + React 19, Drizzle + PostgreSQL, deployed on Cloudflare Workers (Hyperdrive), R2 media pipeline with sharp and blurhash, Strapi-backed journal, Vitest.

OPEN SOURCE

- earshot**, headless React parts for voice-agent UIs, built and published on npm solo, and a call debugger on top (debugger.danolekh.com): reads LiveKit Agents, Pipecat and ElevenLabs calls, puts them on one clock with the

- recording, runs 12 detectors. 226 library and 62 Playwright tests.
- **cardstock**, headless bank-card parts for React 19 on Base UI, built and published on npm solo (cardstock.danolekh.com): 8 WebGL2 shader backgrounds on one shared context, ~194 tests including SSR, npm trusted publishing with provenance.
 - **opentui**, the terminal-UI library opencode is built on. Merged PR #558: browser-like text selection in textareas and a viewport-change selection bug fix.
 - **code-racer**, top contributor in 2023 (WebDevCody): multiplayer race rooms feature plus several fixes.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React 19, Next.js (App Router), TanStack Start / Router / Query, Astro, Tailwind CSS, View Transitions, WebGL2, Zustand, Radix / Base UI, Vite
Backend	Node.js, Bun, Express, Hono, Effect.ts, tRPC, REST APIs, webhooks, Zod, event-driven services
Data	PostgreSQL, Drizzle ORM, Redis, SQLite, S3 / R2
Infra	Docker, GitHub Actions, GitLab CI, Vercel, Cloudflare Workers, AWS, Railway, OpenTelemetry
Other	Strapi, Core Web Vitals / performance, SEO, i18n, LLM integration, Web Audio, Vitest, Playwright, npm packaging, Claude Code daily (1+ yr)

EDUCATION

BSc Computer Science, Taras Shevchenko National University of Kyiv (2022 – 2026)

LANGUAGES

Ukrainian (native), Russian (fluent), English (B2), German (beginner)
